

XM Satellite Radio provides me with entertainment and useful information when I travel while minimizing my need to search the radio dial for the entertainment and information I need. This alone makes me a safer driver as I can concentrate on the road and not the radio dial. I drive over 50,000 miles a year between business and personal use. With the traffic reporting capability of XM I have been able to avoid accidents and congestion in and around some of the major metropolitan areas. Instead of reducing XM's capabilities of providing weather and traffic around many of the nation's cities you should be looking to expand it to include cities other than those currently available. I pay for these services and it should not be up to the National Association of Broadcasters to dictate what I can and cannot hear. As a matter of fact I wish XM would expand to include the NFL, NBA and MLB broadcasts since all of these are available over the internet for a fee.
